Area of Triangles and Other Shapes

Move a piece or double the shape: make a rectangle.

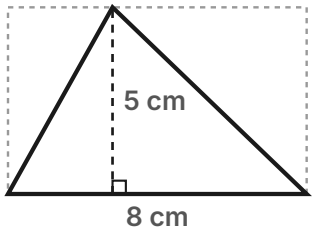

A parallelogram: cut off a triangle, move it over

The triangle on the left fits on the right.
Now it is a rectangle, 7 by 5.

$$7 \times 5 = 35 \text{ sq cm}$$

A triangle is half of a rectangle

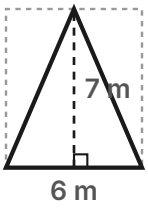

The dashed rectangle is 8 by 5 = 40.
The triangle is half of it.

$$8 \times 5 \div 2 = 20 \text{ sq cm}$$

Other shapes: split them into rectangles and triangles, then add

Your turn!

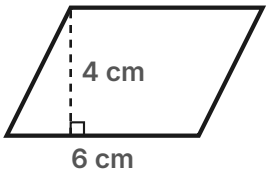

$$\square \times \square \div 2 = \square \text{ sq m}$$

Area of Triangles and Other Shapes: Practice

Find the rectangle. Then base × height.
