Shapes and Quadrilaterals

A quadrilateral has 4 sides and 4 corners.

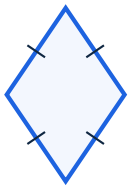

These are all quadrilaterals

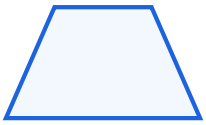

square
4 right angles,
4 equal sides

rectangle
4 right angles

rhombus
4 equal sides

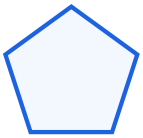

trapezoid
4 sides

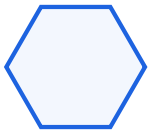

Not quadrilaterals: count the sides

3 sides

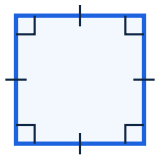

5 sides

6 sides

A square is a rectangle AND a rhombus

It has 4 right angles, like a rectangle.
It has 4 equal sides, like a rhombus.
The little square in a corner means a right angle.

Your turn!

sides 4

Quadrilateral? yes

For teachers

Goal: shapes share attributes; quadrilaterals have 4 sides and 4 corners; squares, rectangles and rhombuses are kinds of quadrilaterals (3.G.1). Ask “How many sides? Any right angles? Are the sides equal?”

Shapes and Quadrilaterals: Practice

Count the sides. Look for right angles and equal sides.
