Adding and Subtracting Fractions

Same size pieces: add or take away the tops.

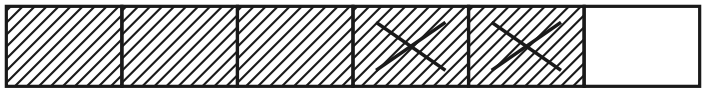

2/8 + 3/8: count the eighths

$$\frac{2}{8} + \frac{3}{8} = \frac{5}{8}$$

2 eighths and 3 more eighths make 5 eighths. The bottom number stays.

5/6 – 2/6: take away sixths

$$\frac{5}{6} - \frac{2}{6} = \frac{3}{6}$$

Split a fraction into parts

$$\frac{3}{5} = \frac{1}{5} + \frac{1}{5} + \frac{1}{5}$$

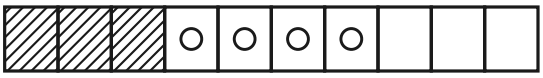

$$\frac{3}{5} = \frac{1}{5} + \frac{2}{5}$$

Any way you split the pieces, they add up to the same amount.

Fraction buddies make one whole

$$\frac{3}{8} + \frac{5}{8} = \frac{8}{8} = 1$$

Your turn!

$$\frac{3}{10} + \frac{4}{10} = \frac{\boxed{7}}{10}$$

For teachers

Goal: add and subtract fractions with the same bottom number, and split a fraction into parts (4.NF.3a, b, d). Say “What size are the pieces? How many pieces now?” Never add the bottom numbers.

Adding and Subtracting Fractions: Practice

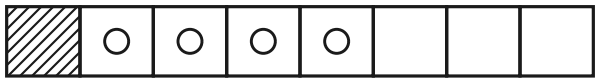

The bottom number tells the size of the pieces. It stays the same.

Part 1 Add with strips

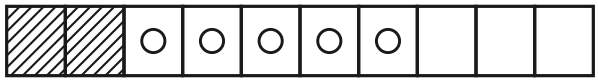

Shaded pieces, then the dotted pieces.

1) 

$\frac{3}{6} + \frac{2}{6} = \frac{\boxed{5}}{6}$

2) 

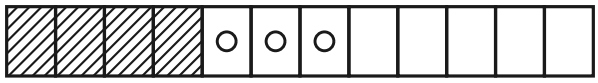

$\frac{1}{8} + \frac{4}{8} = \frac{\boxed{5}}{8}$

3)

6) 

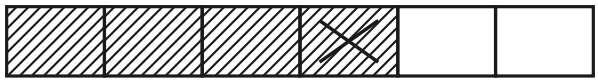

$\frac{2}{5} + \frac{2}{5} = \frac{\boxed{4}}{5}$

Part 2 Take away with strips

Cross out the pieces you take away.
