Answer Key

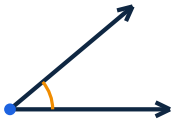

Angles

An angle is a turn between two rays. We measure it in degrees.

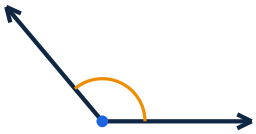

A full turn is 360 degrees. A square corner is 90.

right: 90°

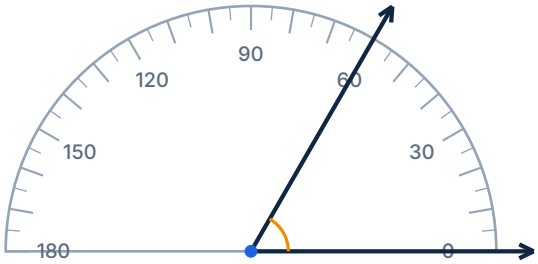

acute: under 90°

obtuse: over 90°

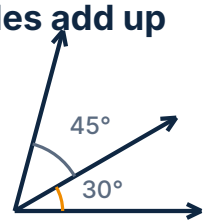

Read a protractor

1. Put the dot on the vertex.
2. Line up one ray with 0.
3. Read where the other ray crosses.

60 degrees

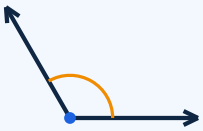

Angles add up

30 + 45 = 75 degrees

Two angles side by side: add their degrees.

Your turn!

acute right obtuse

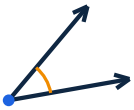

For teachers

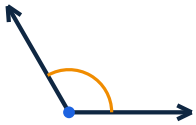

Goal: angles as turns measured in degrees, reading a protractor, and adding angles (4.MD.5–7). Compare with a square corner first: “Is it smaller than a corner, or bigger?”
