Rates and Unit Rates

A unit rate is how much for 1.

12 apples cost $6. How much for 1?

apples	12	6	2	1
dollars	6	3	1	0.5

Halve both, and halve again, until there is 1 apple.
$6 ÷ 12 = $0.50 each.

Per means “for each 1”

150 miles in 3 hours = 50 miles per hour

150 ÷ 3 = 50. Then 5 hours is 5 × 50 = 250 miles.

The better buy has the lower price for 1

4 pens for $2 is $0.50 each. 6 pens for $2.40 is $0.40 each: the better buy.

For teachers

Goal: unit rates and using them (6.RP.2, 6.RP.3b). Say “How much for 1? Then multiply for any number.”
Prices in money: divide the cents.

Rates and Unit Rates: Practice

Find 1 first. Then multiply.

Part 1 Find 1 in the table Divide down to 1, then multiply.
