Decimal Operations

Line up the points. Then think in tenths and hundredths.

Add and subtract: line up the points

$$\begin{array}{r} 12.50 \\ +\ \ 3.75 \\ \hline 16.25 \end{array}$$

12.5 is 12.50: write the zero so every column is filled.
Then add like whole numbers. The point drops straight down.

Multiply: whole numbers first, then name the piece

2.4×1.3: $24 \times 13 = 312$ $\qquad$ $2.4 \times 1.3 = 3.12$

Tenths times tenths are hundredths, so 312 hundredths = 3.12.

Divide: make the divisor a whole number

$4.68 \div 0.6 = 46.8 \div 6 = 7.8$

Both numbers × 10: the answer stays the same. Then divide by a whole number.

Your turn!

$3.6 \times 0.4 =$ 1.44

For teachers

Goal: add, subtract, multiply and divide multi-digit decimals (6.NS.3). Say “Line up the points” and “What size are the pieces?” Never just “count the decimal places”: name tenths and hundredths.

Decimal Operations: Practice

Line up the points. Name the pieces.

Part 1 Line up the points

Write the gray zeros if they help.

1) $23.60 + 8.75 = 32.35$

3) $6.08 + 19.70 = 25.78$

4) $52.30 - 6.84 = 45.46$

5) $315.40 + 8.29 = 323.69$

6) $70.05 - 36.80 = 33.25$

7) $9.40 + 126.37 = 135.77$
