# Decimal Operations

Line up the points. Then think in tenths and hundredths.

## Add and subtract: line up the points

$$\begin{array}{r} 12.50 \\ +\ \ 3.75 \\ \hline 16.25 \end{array}$$

12.5 is 12.50: write the zero so every column is filled.
Then add like whole numbers. The point drops straight down.

## Multiply: whole numbers first, then name the piece

$2.4 \times 1.3$: $24 \times 13 = 312$ $\qquad$ $2.4 \times 1.3 = 3.12$

Tenths times tenths are hundredths, so 312 hundredths = 3.12.

## Divide: make the divisor a whole number

$4.68 \div 0.6 = 46.8 \div 6 = 7.8$

Both numbers × 10: the answer stays the same. Then divide by a whole number.

**Your turn!**

$3.6 \times 0.4 =$ ☐
