GCF and LCM

The biggest factor they share. The smallest multiple they share.

Greatest common factor (GCF) of 12 and 18

Factors of 12: **1 2 3 4 6 12**

Factors of 18: **1 2 3 6 9 18**

GCF = 6

1, 2, 3 and 6 are in both lists. The biggest one is 6.

Least common multiple (LCM) of 4 and 6

Multiples of 4: **4 8 12 16 20 24**

Multiples of 6: **6 12 18 24 30 36**

LCM = 12

Count by each number. 12 is the first one in both lists.

Use the GCF to pull a sum apart

$$36 + 8 = 4 \times (9 + 2)$$

4 is the GCF of 36 and 8.
36 is 4 × 9 and 8 is 4 × 2.

Your turn!

GCF of 8 and 12 = **4** LCM of 8 and 12 = **24**

For teachers

Goal: find the GCF of two numbers up to 100 and the LCM of two numbers up to 12, and use the GCF to pull a sum apart (6.NS.4). Say “List the factors. Which is the biggest one in both?”
