Adding and Subtracting Fractions

Same size pieces: add or take away the tops.

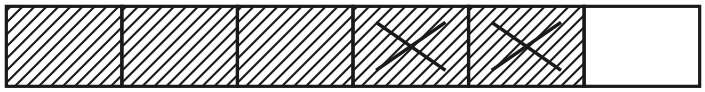

2/8 + 3/8: count the eighths

$$\frac{2}{8} + \frac{3}{8} = \frac{5}{8}$$

2 eighths and 3 more eighths make 5 eighths. The bottom number stays.

5/6 – 2/6: take away sixths

$$\frac{5}{6} - \frac{2}{6} = \frac{3}{6}$$

Split a fraction into parts

$$\frac{3}{5} = \frac{1}{5} + \frac{1}{5} + \frac{1}{5}$$

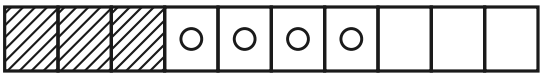

$$\frac{3}{5} = \frac{1}{5} + \frac{2}{5}$$

Any way you split the pieces, they add up to the same amount.

Fraction buddies make one whole

$$\frac{3}{8} + \frac{5}{8} = \frac{8}{8} = 1$$

Your turn!

$$\frac{3}{10} + \frac{4}{10} = \frac{\square}{10}$$

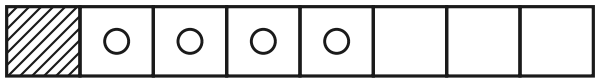

Adding and Subtracting Fractions: Practice

The bottom number tells the size of the pieces. It stays the same.

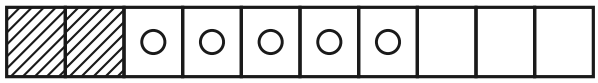

Part 1 Add with strips Shaded pieces, then the dotted pieces.

1) 

$$\frac{3}{6} + \frac{2}{6} = \frac{\square}{6}$$

$$\frac{4}{12} + \frac{3}{12} = \frac{\square}{12}$$

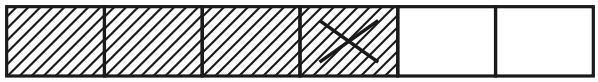

6) 

$$\frac{2}{5} + \frac{2}{5} = \frac{\square}{5}$$

Part 2 Take away with strips Cross out the pieces you take away.

7) 

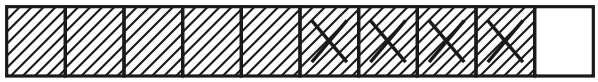

$$\frac{5}{8} - \frac{3}{8} = \frac{\square}{8}$$
