Line Plots with Data

An X for each one. Then add them up and share them out.

8 jars of water, in eighths of a liter

3/8 L, 4/8 L, 4/8 L, 5/8 L, 5/8 L, 5/8 L, 6/8 L, 1 L

Water in each jar (L)

All together: 3 + 4 + 4 + 5 + 5 + 5 + 6 + 8 = 40 eighths = 5 L.

Pour it so every jar has the same: 40 eighths ÷ 8 jars = 5/8 L each.

Fair share means total ÷ how many

$$\frac{40}{8} \div 8 = \frac{5}{8}$$

Add everything up, then share it equally. Count in eighths so it stays easy.

Your turn!

$$\frac{2}{8} + \frac{3}{8} + \frac{3}{8} + \frac{4}{8} = \frac{\square}{8}$$

Line Plots with Data: Practice
