Comparing Decimals

Same whole? Make both hundredths, then compare.

0.4 or 0.37?

0.4 0.37

0.4 is 4 tenths: 4 full rows.
That's 40 hundredths.
40 hundredths > 37 hundredths.

$$0.4 = 0.40 > 0.37$$

Longer is not always bigger

0.37 has more digits than 0.4, but fewer hundredths.
Compare the tenths first. If they match, compare the hundredths.

$0.65 < 0.68$ Same tenths (6), so look at the hundredths.

Money helps

$\$0.50 > \$0.45$ 5 dimes is more than 4 dimes and 5 pennies.

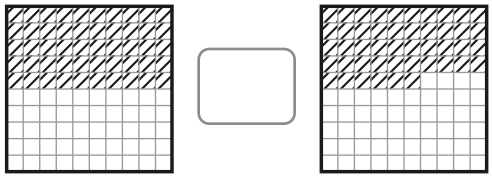

Your turn!

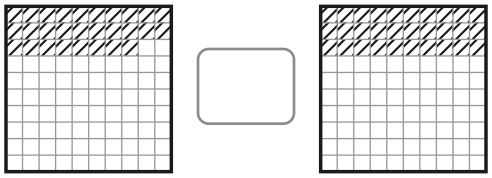

$0.3 \square 0.29$ Write 0.3 as hundredths first.
