Dividing Fractions

How many of these fit in that? Make the pieces the same size.

2/3 ÷ 1/6: how many sixths fit in two thirds?

Cut the thirds into sixths.
The shaded part is 4 sixths.

$$\frac{2}{3} \div \frac{1}{6} = 4$$

Same bottoms: divide the tops

$$\frac{3}{4} \div \frac{1}{8} = \frac{6}{8} \div \frac{1}{8} = 6$$

When the pieces are the same size, it is 6 pieces ÷ 1 piece.

It doesn't have to come out even

$$\frac{3}{4} \div \frac{2}{4} = \frac{3}{2} = 1\frac{1}{2}$$

3 pieces ÷ 2 pieces:
one and a half twos fit.

Your turn!

$$\frac{1}{2} \div \frac{1}{8} = \boxed{4}$$

For teachers

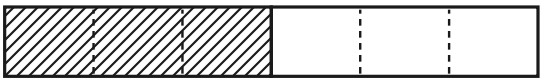

Goal: divide fractions by fractions (6.NS.1). It builds on packet 84 (how many pieces fit). Say “Make the pieces the same size, then divide the tops.”

Dividing Fractions: Practice

Same size pieces, then divide the tops.
